| Sequence 46, Application US/10012070A
| Sequence 46, Application US/10012070A
| Patent NO. 6867293
| GENERAL INFORMATION:
| APPLICANT: Hawkes, Timothy
| APPLICANT: Marner, Simon
| APPLICANT: Marner, Simon
| APPLICANT: Bachoo, Sarvinder
| APPLICANT: Bachoo, Sarvinder
| APPLICANT: Bickerill, Andrew
| TITLE OF INVENTION: Herbicide Resistant Plants
| FILE REFERENCE: 50490/UST
| CURRENT APPLICATION NUMBER: US/10/012,070A
| CURRENT APPLICATION NUMBER: PCT/GB00/01573
| PRIOR APPLICATION NUMBER: PCT/GB00/01573
| NUMBER OF SEQ ID NOS: 57
| SOFTWARE: Patentin Ver. 2.0
| SEQ ID NO 46
| LENGTH: 323

Sequence 3 Application US/09810861B

Patent No. 6770799

GENERAL INFORMATION:

APPLICANT: Mor, Tasfrir S.

APPLICANT: Mor, Charles J.

APPLICANT: Mason, Hugh S.

TITLE OF INVENTION: EXPRESSION OF RECOMBINANT HUMAN ACETYLCHOLINESTERASE IN TITLE OF INVENTION: EXPRESSION OF PROMINANT PLICANTION WIMBER: US/09/810, 861B

CURRENT PILING DATE: 2001-03-16

PRIOR FILING DATE: 2000-03-17

NUMBER OF SEQ ID NOS: 5

SOFTWARRE: PatentIN Ver. 3.1

SEQ ID NO 3

LENGTH: 5767
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       6419

/note="Vector: pDS-Lox; Sequence generated in the course of an Arabidopsis T-DNA tagging program. TAIL-PCR was used to generate sequencing templates that represent A.t. genomic DNA flanking the left border of the pDs-Lox T-DNA insert. PCR products were sequenced directly by using the p745 primer 5' AACGTCCGCAATGTGTTAITAAGTTGTC 3'"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CNSOAST8

Arabidopsis thaliana Full-length CDNA Complete sequence from clone GSLTFB532B03 of Flowers and buds of strain col-0 of Arabidopsis Exaliana (thale cress).

Definition of the terms used to describe the quality of the clone:
The about 2250 sequences from the clone collection were sorted according to clones and clustered. If more than one contig was formed, the clone was designated 'Contamination'. The contigs and singlerons were blasted against CDS plus pseudogenes from the TIGRv5 annotation, and the resulting AGI code is presented if more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Paz-Ares, J., Valencia, A., Costantino, P., Vittorioso, P., Davies, B., Gilmartin, P., Giraudat, J., Parcy, F., Reindl, A., Sablowski, R., Coupland, G., Martin, C., Angenent, G.C., Bacumlein, H., Mock, H.P., Droege-Laser, W., Gatz, C., Kavanagh, T., Kushnir, S., Zabeau, M., Boux, T., Hordsworth, M., Ruberti, I., Ratcliff, F., Smeekens, S., Somssich, I., Weisshaar, B. and Traas, J.

REGIA, an EU project on functional genomics of transcription factors from Arabidopsis thaliana

The sequences are based on single pass reads.

Life Technologies (a division of Invitrogen) members carried out full-length libratiries construction : Temple G. Genoscope members carried out sequencing and annotation : Castelli V. Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach D., Salanoubat M.

URGV INRA : Clepet C., Caboche M.

Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). S prime and 3 prime are assembled with Phrap.
                                        Eukaryota; Viridiplantae, Streptophyta; Embryophyta; Tracheophyta; Spermatophyta; Magnoliophyta; eudicotyledons; core eudicotyledons; rosids; eurocids II; Brassicales; Brassicaceae; Arabidopsis.

than 90 percent identity was found. The sequences were also blasted against all TIGRv5 introns, and matches longer than 50 bp with 95 percent identity are reported as 'intron found'. The remaining terms for Sequalysis describe the outcome of the evaluation of the CDS detected after pairwise alignment with CDS plus pseudogenes from the TIGRv5 annotation file. The sequences or contigs for which a full CDS with or without STOP codon was detected, a BLASTP against all TIGRv5 protein sequences was performed. Full perfect: 100 percent identity, full good: better than 95 percent identity over more than 95 percent of the sequence; partial good: better than 95 percent of the sequence; performed the sequence; weak similarity: less than 95 percent identity over less than 95 percent of the sequence; no similarity: no hit from BLASTP. Note that the collection contains a few clones for which sequencing was not successful, which could have simple technical reasons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /lab host="800-610"

/clone servetor: pDONR201; In the context of the BU-funded project REGIA (QLG-CT11995-00876, coordinator Javier Paz-Ares), a set of transcription factor ORFs was generated. The ORFs were produced in a decentralized way in the labs of the participants. Most of the ORFs were generated by RT-PCR using cDNA from various A. thaliana tissues as a template. Initially, it was planned to use yeast recombination to move the ORFs from the Cloning vectors into target constructs. For this reason, a number of the clones contain 'REGIA tags' (RG_tag1: 5pr-ATTCCACCACC-3pr; RG_tag2: 5pr-ATTCCACCACC-3pr; RG_tag2: 5pr-ATTCCACCACC-3pr; RG_tag2: 6pr-CATGGCAATTCCCACC-3pr; During the lifetime of the project, the GATEWAY system became available and finally all ORFs were transferred into GATEWAY vectors. At the end of the REGIA project, the clones were collected as plasmid DNA. For end-sequencing at the DNA core facility of the WBIshaar), the plasmids were re-transformed into BHSADPA, arrayed into 96 well plates and new plasmid DNA was prepared. Re-transformation proved to be difficult because a number of clones are rectansformed into proved to be difficult because
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   4352

Data analysis performed in the frame of REGULATORS (Exploiting inter-species conservation in promoter sequences to identify regulators of reproductive development and physiological performance), a Trilateral Co-Operation in Plant Genomics between Spain (MCYT), France (GENOPLANTE) and Germany (GABI) coordinated by G. Coupland (coupland-ad-mpiz-koeln, mpg.de). Authors: Vincent Thareau (IBP-Oreay UMR8618 CNRS-UPS, thareau-ad-ibp.u-psud.fr) and DR750042 972 bp mRNA linear EST 19-JUL-2005 79-L021445-065-006-G10-SeLB MPIZ-ADIS-065d Arabidopsis thaliana cDNA clone 006-G10, mRNA sequence. 4592 4652 4712 4772 492 lecharny-ad-ibp.u-psud.fr).
Definition of the terms used to describe the quality of the clone:
The about 2250 sequences from the clone collection were sorted
according to clones and clustered. If more than one contig was
formed, the clone was designated 'Contamination'. The contigs and Eukaryoča, Viridiplantae, Streptophyta, Embryophyta, Tracheophyta, Spermatophyta, Magnoliophyta, eudicotyledons, rosids, eurosids II, Brassicales, Brassicaceae, Arabidopsis. ```
singletons were blasted against CDS plus pseudogenes from the TIGRA'S annotation, and the resulting AGI code is presented if more than 90 percent identity was found. The sequences were also blasted against all TIGRA'S introns, and matches longer than 50 pp with 95 percent identity are reported as 'intron found'. The remaining terms for Sequallysis describe the outcome of the evaluation of the CDS detected after pairwise alignment with CDS plus pseudogenes from the TIGRA'S annotation file. The sequences or contigs for which a full CDS with or without STOP codon was detected, a BLASTP against all TIGRA'S protein sequences was performed. Full perfect: 100 percent identity, full good: better than 95 percent identity over more than 95 percent of the sequence; partial good: better than 95 percent identity over less than 95 percent of the sequence; weak similarity: less than 95 percent identity over less than 95 percent of the sequence; no similarity: no hit from BLASTP. Note that the collection contains a few clones for which sequencing was not successful, which could have simple technical reasons. Obviously, information about these clones is missing in the figure found that found the found in the found in the found found have simple technical reasons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             4233 TGGTGGAACGTGCTCGGATCGCAAAAGTCCCATTGCCTGAAGCAGCTCTAAATTGCCCTA 4292
